

Rainwater drainage

External linear dewatering systems

Professional systems for rainwater drainage

NEW

Capricorn linear dewatering systems are suitable for use in areas around the house, e.g. in terraces or in front of garages. Different types of zinc-plated steel grates allow efficient rainwater drainage. Grates are provided with mechanisms preventing them from falling out or being pulled out from the drain channel.

- Easy to install
- Frost- and weather-resistant
- Slip-proof zinc-plated steel grate
- Left-hand or right-hand connection – Ø110 connection
- The bottom can be cut out as required – Ø110 connection

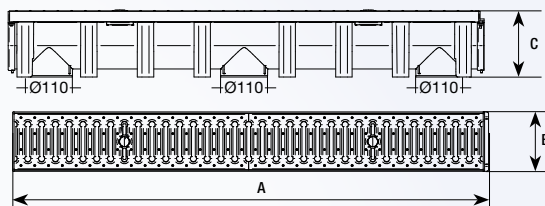

PREVENT WATER SEEPAGE

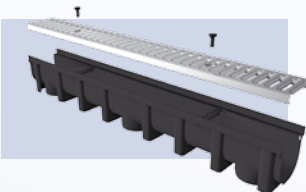

Capricorn external linear dewatering systems offer an end-to-end solution ideal for removing water from terraces, land lots, bicycle routes, sports and recreational facilities.

A = 1000 mm
B = 127 mm
C = 141 mm

Product available also in version with grate fixing set

Technical specifications

- Length of a single drainage channel: 1 m
- Lower outlet and connections: Ø110
- Propylene body and outlet
- Grate made of zinc-plated steel
